

Advanced Motorsport Engineering Report

Alessandro Ferrario (10766865)

Andrea Sgotto (10796906)

Giacomo Sanguin (10732325)

a.y. 2025 / 2026

POLITECNICO
MILANO 1863

Contents

1	Lab 0: Basics	1
1.1	Introduction	1
1.2	Exercise 1: Vehicle speed in a corner	1
1.2.1	Results	1
1.3	Exercise 2: Minimum lap time	3
1.3.1	Optimal Driving Strategy and Speed Profile	3
1.3.2	Lap Time Computation: Results and Comments	4
1.4	Exercise 3: Coast down test	6
1.4.1	Governing Equations and Curve Fitting	6
1.4.2	Parameters Computation: Results and Comments	8
1.5	Exercise 4: Load transfer during braking	9
1.6	Exercise 5: Constant speed test	11
1.6.1	Methodology and main features	11
1.6.2	Computation procedure	11
2	Lab 1: Tyres	15
2.1	Introduction	15
2.2	Exercise 1: Analysis of Tyre Thermal Behavior	15
2.2.1	Code Logic	15
2.2.2	Ambient simulation	24
2.2.3	Toe Angle variation analysis in Cold Race	24
2.2.4	Toe Angle variation analysis in Hot Race	29
2.2.5	Weight Distribution and Aero Balance effect	35
2.2.6	Alternative Tire Warm Up Strategies	43
2.3	Exercise 2: Friction Law Identification	44
2.3.1	Physical Filtering of the Telemetry	44
2.3.2	Data-Driven Models	46
2.3.3	Fragment-Based Reconstruction of the WLF Master Curve	48
2.3.4	Predictive Performance	50
2.3.5	Data-Supported and Extended WLF Maps	51
2.3.6	Discussion and Conclusions	53
3	Lab 2: Lap Time Simulation Pt.1	54
3.1	Introduction	54
3.2	LapTime Simulation: Quasi steady State vs Transient	54
3.2.1	Quasi Steady State Simulation: Code Logic	54
3.3	Track Fuel Effect Analysis	56
3.3.1	Stint Simulation and Linearity Validation	56
3.3.2	Normalized Index Evaluation	57
3.4	Aero setup choice	58
3.4.1	Isochrones Computation	58
3.4.2	Polar Curve Plot and Final Setup Considerations	60
3.4.3	Beyond Lap Time Simulation: Additional KPIs for Aero Setup	62
4	Lab 3: Race Cars Braking System (Brembo)	63
4.1	Introduction	63
4.1.1	Step 0: OpenLAP Simulation	63

4.1.2	Step 1: Bicycle Model and Ideal Braking Limits	64
4.2	Exercise 1: Disc Thermal Sizing	65
4.2.1	Objectives and Requirements	65
4.2.2	Braking Power Calculation	65
4.2.3	Thermal Model Implementation	67
4.2.4	Disc Temperature Profile Extraction	67
4.3	Exercise 2: Brake Circuit Sizing	69
4.3.1	Objectives and Requirements	69
4.3.2	Ideal Brake Balance Computation	69
4.3.3	Brake System Mechanical Model	70
4.3.4	Component Selection	70
4.3.5	Brake Balance Tuning Strategy	71
4.4	Exercise 3: Bicycle Model simulation	74
5	Lab 4: Lap Time Simulation Pt.2	76
5.1	Introduction	76
5.2	Exercise 1: Ride Heights Optimal Setup	76
5.2.1	Ground Effect and Aero Mapping	76
5.2.2	Dynamic Aerodynamics Evaluation	77
5.2.3	Genetic Algorithm Optimization for Vehicle Setup	79
5.2.4	Optimization Outcomes	81
5.2.5	Theoretical vs. Practical Application	83
5.2.6	Model Limitations	85
5.3	Exercise 2: Race Strategy with Lift and Coast	86
5.3.1	L&C Sensitivity on LapTime	86
5.3.2	Prima Variante vs Lesmo 1	87
5.3.3	40-Laps Race Optimal Strategy	88
5.3.4	Push Race	89
5.3.5	Constant Lift Race	90
5.3.6	Dynamic Lift Race	92
5.3.7	Final Comparison	95
5.3.8	Final Comments and Model Neglection	96
6	Lab 5: Lap Data Analysis with WinTAX4	97
6.1	Introduction	97
6.2	Exercise 1: Acceleration Data Comparison	97
6.2.1	Reference System Transformation	97
6.2.2	Comparison performed on WinTAX	100
6.2.3	Final Plots and Conclusions	101
6.3	Exercise 2: Lap Report for Maximum Lateral Acceleration	104
6.3.1	Telemetry Evaluation and Circuit Layout	104
6.3.2	Results and Discussion	105
6.4	Mugello Circuit	105
6.5	Telemetry Evaluation and Circuit Layout	106
6.5.1	Results and Discussion	107
7	Lab 6: MLTP	109
7.1	Introduction to the MLTP Simulation Framework	109
7.2	Objective Function and Regularization Penalties	109

7.3	Energy vs. Lap Time: The Pareto Front and Solver Anomalies	110
7.4	Telemetry Analysis and Lift & Coast Strategy	111
7.5	Spatial Distribution of Dominant Physical Limits	112
7.6	Energy Deployment and Savings Mapping	113
8	Lab 7: Setup Optimization with VI-CRT	116
8.1	Introduction	116
8.2	Track Layout and Path Creation	116
8.3	SpeedGen vs MaxPerformance Event	118
8.4	Setup Comparisons	119
8.4.1	Long vs Short Gear Setup	119
8.4.2	High vs Low Downforce Setup	120
8.4.3	RARB Adjustment: Under vs Over-steering tendency	122
8.5	Design Of Experiment Analysis (DOE)	124
8.5.1	Toe Angle	124
8.5.2	Stiffness Optimization and Ride Heights Check	126
9	Seminar: Strategies and management in Race Track engineering	130
9.1	Introduction	130
9.2	The Competitive Environment and Team Synergy	130
9.3	Technological Integration: Engineering vs. Data Science	130
9.4	Strategic Differences: Formula 1 and Endurance Racing	130
9.5	Managerial Leadership and the Orchestra Model	130
9.6	Operational Methodologies: Test vs. Performance Modes	131
9.7	Cultural Awareness and Communication	131
9.8	Strategic Preparation and Failure Analysis	131
9.9	Professional Philosophy: Work-Life Integration	131
10	Seminar: Racing Tires	132
10.1	Intro - Main Differences Between Racing and Road Tires	132
10.1.1	Design Philosophy and Construction	132
10.1.2	Competitive racing environment	132
10.2	Basic Tire Shape Design	133
10.3	Rubber Compound: Viscoelastic Properties	134
10.4	Tire Track Data Analysis	136
10.5	Tire Track Data Analysis	137
11	Seminar: Sustainability in Motorsport (Marelli)	138
11.1	Introduction	138
11.2	The concept of sustainability	138
11.3	Environmental Metrics and Corporate Frameworks	139
11.4	The Paradox of Motorsport: Perception vs. Reality	140
11.5	Innovation as a Sustainability Driver	140
11.6	Design for Sustainability (DfS) Case Studies	141
11.6.1	Carbon-Fiber Chassis	141
11.6.2	Electronic and Electromechanical Units	141
11.6.3	Fuel Injectors	141
11.6.4	Racing Tires	141
11.7	Conclusion	142

12 Seminar: F1 Vehicle Setup (Ferrari)	143
12.1 Introduction and Overview	143
12.2 Car Design vs. Race Weekend	143
12.3 The Challenge of Trade offs: Ground Effect Regulation	144
12.4 Key Setup Tuning Parameters	145
12.5 Virtual Simulation Models	146
12.6 Data Acquisition and Handling Stability	146
13 Seminar: Ducati corse	147
13.1 Introduction	147
13.2 System Complexity: The Motorcycle-Rider Equilibrium	147
13.3 Virtual Environment: Subsystem Modeling	147
13.3.1 Rigid Body and Inertial Parameterization	148
13.3.2 Aerodynamics and Tire Dynamics	148
13.4 Simulation Methodologies	148
13.4.1 Full Multi-Body Simulation	149
13.4.2 Lap Time Simulation (LTS)	149
13.5 Real Environment: Telemetry and State Estimation	149
13.5.1 The Sensor Weight Constraint	149
13.5.2 Kalman Filtering and Kinematic Estimation	150
14 Seminar: Motorsport technology for cycling tyres (Pirelli)	151
14.1 Introduction	151
14.2 Anatomy and architecture	151
14.3 Structural mechanics and pressure dynamics	151
14.4 Interaction with the ground: Rolling resistance and impedance	152
14.5 Aerodynamics and system integration	153
14.6 Multivariable optimization and trade-offs	153
14.7 Impact of Parameters on Race Time	153
15 Seminar: Mechanical Design and Mechatronics in Racing Applications (Marelli)	155
15.1 Introduction	155
15.2 Electronic Control Unit (ECU) and PCB Design	155
15.2.1 PCB Materials and Layers	155
15.2.2 Connectors and Signal Integrity	155
15.2.3 Thermal Management	156
15.2.4 Vibration and Environmental Management	157
15.3 MGU and Future Technological Trends	157
15.3.1 Design Optimization and Future Challenges	157
